

Appln No. 10/816,566
Amdt date April 4, 2008
Reply to Office action of January 7, 2008

Amendments to the Specification:

Please amend the paragraph beginning on page 7, line 13 through page 7, line 22 as follows:

When the enhanced breathing device 10 is positioned as shown in FIG. 3, the intraoral segment 18 extends along an outside of dentitions and around a rearmost dentition and past a retromolar space 27 (defined as an area in the user's upper or lower dentition past the user's last molar or an area past the user's upper and lower dentitions), enters the posterior oropharynx 30 (defined as the posterior oral cavity behind the user's dentition) and terminates between the posterior tongue and the soft palate. The retromolar space 27 as defined herein is created by the removal or nonexistence of at least the upper and/or lower third molar in the user's mouth 25.
